

Newsletter 1/2015

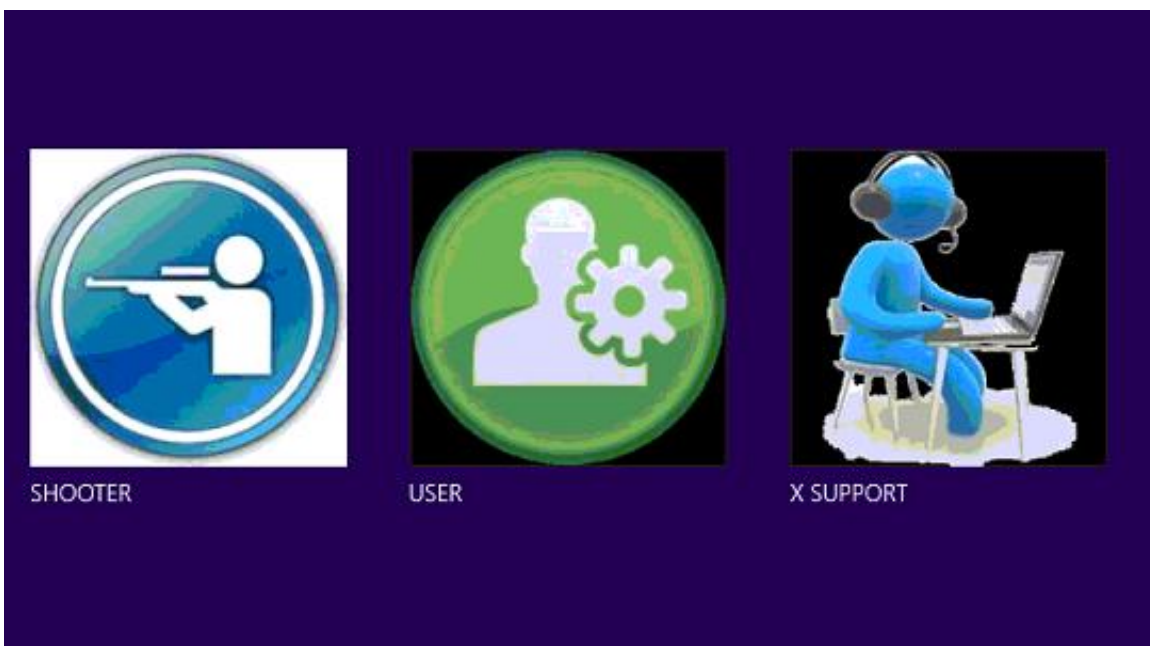

Here a quick update to where things are heading with our ShootingCinema technology. As you all know we are just in the final developing stages of the new gaming console/computer. All old units will be replaced by me (free of charge) once the new system arrives.

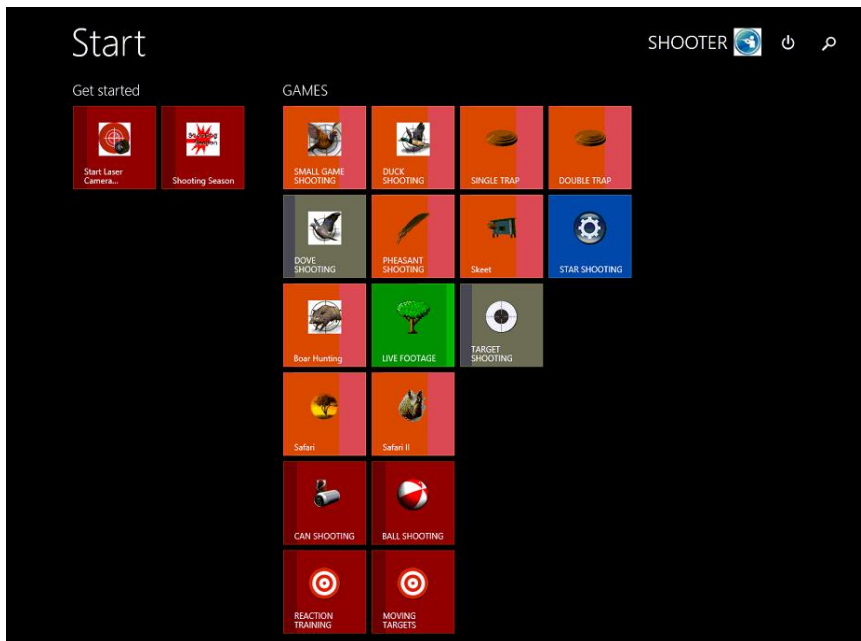

Mini WiFi gaming keyboard & new gaming console (both in proportion with the console being 6x20x22cm)

The best is definitely happening inside! Apart from being smaller, faster & quieter these units have a lot more features. Here a summary:

Login screen with three options (SHOOTER, USER, SUPPORT)

SHOOTER screen

The SHOOTER does not have access to any areas outside the games. The only thing he/she can do is to play games and start the system. This is perfect for units that you want to hire out or leave unattended with clients, guests or family!

USER screen

You are the USER (when you are not shooting)! The additional “Admin” panel gives you access into many areas. You can customize background images, videos, loading screens and so on.

SUPPORT screen

If you connect your console to the internet we can access it remotely 24/7 for support and to make changes to your setup. The SUPPORT panel gives us access into any area of the console.

--

I hope you enjoyed this quick update! Huge developments and opportunities are in the pipeline and many just around the corner.

We look forward to developing a great network of partners all over NZ!

Have a fantastic week!

Harald
